
DISEASE:
Genetic hyperferritinemia without iron overload

NAME:	Genetic hyperferritinemia without iron overload
DESCRIPTION:	Genetic hyperferritinemia without iron overload is a rare biological anomaly defined as high serum ferritin levels without elevations of transferrin saturation, tissue or serum iron and characterized by an apparently asymptomatic clinical phenotype.
ORPHACODE:	254704
SYNONYMS:	Benign hyperferritinemia
XREF(S):	Orphanet
ANALYTE(S):	FTL
CREATED:	13 May 2019 - 01:02
CHANGED:	22 Jun 2023 - 16:14
