

DISEASE:
Mucopolysaccharidosis type 2, attenuated form

NAME:	Mucopolysaccharidosis type 2, attenuated form
DESCRIPTION:	Mucopolysaccharidosis type 2, attenuated form (MPS2att), the less severe form of MPS2 (see this term), leads to a massive accumulation of glycosaminoglycans and a wide variety of symptoms including distinctive facies, short stature, cardiorespiratory and skeletal findings. It is differentiated from mucopolysaccharidosis type 2, severe form (see this term) by the absence of cognitive decline.
ORPHACODE:	217093
SYNONYMS:	Hunter syndrome type B Iduronate 2-sulfatase deficiency type B MPS2B MPSIIB Mucopolysaccharidosis type 2B Mucopolysaccharidosis type II, attenuated form Mucopolysaccharidosis type IIB
XREF(S):	Orphanet ICD-10 OMIM
ANALYTE(S):	IDS
CREATED:	13 May 2019 - 01:02

CHANGED:	22 Jun 2023 - 16:14
