

**DISEASE:**  
**Persistent polyclonal B-cell lymphocytosis**

<b>NAME:</b>	Persistent polyclonal B-cell lymphocytosis
<b>DESCRIPTION:</b>	Persistent polyclonal B-cell lymphocytosis (PPBL) is a rare, generally benign, lymphoproliferative hematological disease characterized by: chronic, stable, persistent, polyclonal lymphocytosis of memory B-cell origin, the presence of binucleated lymphocytes in the peripheral blood, and a polyclonal increase in serum immunoglobulin M (IgM). Patients are most frequently asymptomatic or may present with mild splenomegaly.
<b>ORPHACODE:</b>	300324
<b>SYNOMYS:</b>	PPBL Persistent polyclonal B-cell lymphocytosis with binucleated lymphocytes
