

DISEASE:
Acute myeloid leukemia with minimal differentiation

NAME:	Acute myeloid leukemia with minimal differentiation
DESCRIPTION:	A rare subtype of acute myeloid leukemia characterized by clonal proliferation of poorly differentiated myeloid blasts in the bone marrow, blood or other tissues. It usually presents with anemia, thrombocytopenia and other nonspecific symptoms related to ineffective hematopoiesis (fatigue, bleeding and bruising, recurrent infections, bone pain) and/or extramedullary site involvement (gingivitis, splenomegaly). Low remission rates are reported.
ORPHACODE:	98832
SYNONYMS:	AML M0 Minimally differentiated acute myeloblastic leukemia
XREF(S):	Orphanet ICD-10
ANALYTE(S):	FLT3
