

**DISEASE:**  
**Serrated polyposis syndrome**

<b>NAME:</b>	Serrated polyposis syndrome
<b>DESCRIPTION:</b>	A rare, genetic intestinal disease characterized by the presence of multiple (usually large) hyperplastic/serrated colorectal polyps, usually with a pancolonic distribution. Histology reveals hyperplastic polyps, sessile serrated adenomas (most common), traditional serrated adenomas or mixed polyps. It is associated with an increased personal and familial (first-degree relatives) risk of colorectal cancer.
