

DISEASE:
Pustulosis palmaris et plantaris

NAME:	Pustulosis palmaris et plantaris
DESCRIPTION:	A rare skin disease characterized by chronic eruption of sterile pustules on an erythematous and desquamative background. The lesions are usually painful and affect the palms and soles, sometimes also the lateral aspects of hands and feet. Nail lesions (such as nail pitting, onycholysis, subungual pustules, and nail dystrophy) are also observed. The condition takes a chronic and relapsing course. Typical associations are psoriatic arthritis, thyroid gland dysfunction, and smoking.
ORPHACODE:	163927
SYNONYMS:	LPP Localized pustular psoriasis PPP Palmoplantar pustulosis
XREF(S):	Orphanet ICD-10 MedDRA
ANALYTE(S):	IL36RN AP1S3
CREATED:	13 May 2019 - 01:02
